

Blast Dialer

This communication technique is based on computer technology to send pre-recorded or customize messages to the multiple individuals.

Voice Message Blasting

- In emergency situations alerting people and getting help in time is very crucial.
- In turn sending the emergency message to the relevant group plays vital role.
- Voice message blasting is the fastest and most convenient way of delivering important messages to a large group of people.
- This is very useful in case of emergencies and even regular public announcements.
- The moment call hits IVR, the blast dialing activity takes place where depending on who has raised the request, the given set of destinations are called immediately on remaining available channels.
- The number of calls must be dialed at any given time under any circumstance decides how many channels Blast Dialer one should opt for.
