

TS-Fax server application, offers easy and automated process of FAX transmission and distribution.

TS-FAX Server enables computer users to send and receive fax messages over computer connected to LAN.

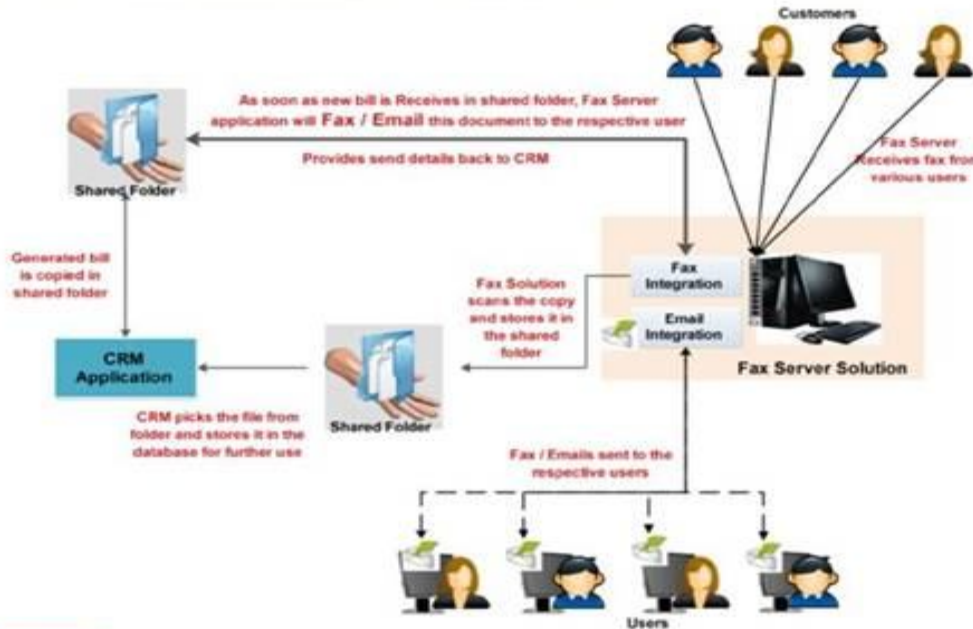

This application is Hardware-Software combination

It has capability to seamlessly integrate and communicate with any business application (CRM, Database etc.).

Features

- Triggers the sending process of the received documents on the mapped FAX numbers
- Scans and stores the received FAX document & Gives it to the CRM with respective FAX number.
- The number of fax lines in an organization can be reduced, as the server can queue the large numbers of faxes and send each when any of a number of lines is free
- Incoming faxes can be printed on a standard computer printer.
- Deliver outbound faxes via the Least Cost path
- Provides standard reports related to the FAX operations.
