

PAudium - Voice Logging Solution

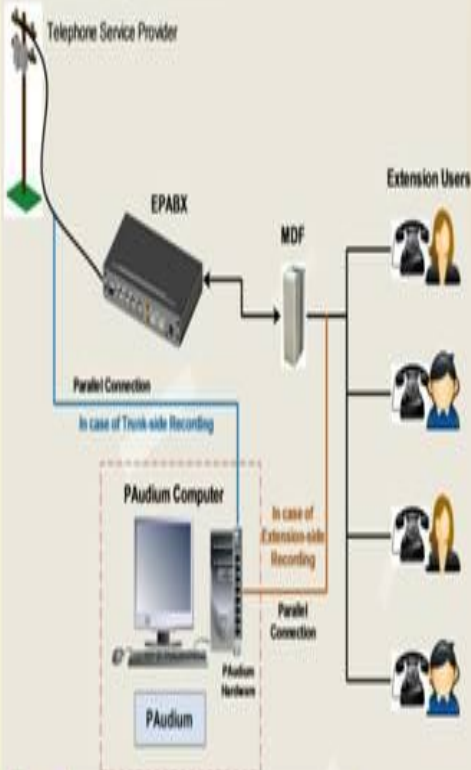

By TELESOFT

The PAudium is a Windows based telephone voice recorder system.

It comes as a hardware and software Combo.

We Offer:

- **PAudium Analog**, for recording Analog trunks & extensions
- **PAudium Digital**, for recording Digital extensions
- **PAudium PRI**, for recording PRI Channels
- **PAudium IP**, IP Phones

PAudium offers you unique & best in class features like:

CDR Mapping:

CDR Mapping facilitates to store & access recording based on extension over trunk & PRI side logging.

Selective Recording:

Recording facility can be scheduled based on work time and days.

Facility to select any extension or trunk to be recorded or not is available.

Split Recording File:

Recorded conversation can be split based on participating extension in case of multiple transferred calls.

On demand Recording:

PAudium facilitates **on-demand Recording facility**, which lets you to enable or disable recording of on-going communication by dialing specialized code from telephone instrument.

Multiple Recording Backups:

PAudium maintains the additional copy of specific conversations in different folders. Such folders can be different for different extensions or telephone lines.
